[Ion exchange studies of \$^{133}\text{Ba\(II\)}\$ using synthetic inorganic ion exchanger](#)

by Dubey, Nilesh B.; Bagla, Hemlata (Nuclear and Radiochemistry Lab., Kishinchand Chellaram College, Mumbai (India))

from Proceedings of DAE-BRNS symposium on nuclear and radiochemistry

[en] In the present work zinc ferrocyanide exchanger has been used for rapid and selective adsorption of Ba(II). The effects of various parameters such as pH, time of equilibration, exchanger concentration, salts and foreign ions have been studied using ^{133}Ba as a tracer. (author)
