# **EDULINK SERIES LECTURE -3**

Under the aegis of Star Status Activity

## **'BEYOND THE HORIZON OF SCIENCES** **- A MANAGEMENT PERSPECTIVE'**

**Resource person** – Mr. Pratik Sindhwad

**Participants**- 41 Students of S.Y.B. Sc and T.Y.B. Sc Life Sciences;  
7 faculty members

The third lecture in the series of Edu Link, titled 'Beyond the horizon of sciences- a management perspective' was organized on 31<sup>st</sup> October 2020 at 9:30 am by the Department of Life Sciences under the aegis of DBT Star Status. It was attended by 41 student participants and 7 faculty members from the department. The resource person for the session was Mr. Pratik Sindhwad, Alumnus of the Department and currently serving as a Senior Consultant at EY, Bangalore, India. The program began with the welcome address given by Dr. Sagarika Damle, HOD of Life Sciences and Dr. Tejashree Shanbhag, Vice- Principal of the Science Section and Program Coordinator, Edu Link. They outlined the aim of having this series, which is the confluence of the past and present students. It is a platform, which enables the current students of S.Y.B.Sc & T.Y.B.Sc of the Department to get insights and guidance with respect to different options and opportunities available after graduation ensuring that the students will have a smooth journey ahead in respect of their education.

Science students are not only restricted to choose research, teaching or working in a Food/Pharmaceutical based industry, they could venture out into the various backgrounds as well. A well-suited example for this statement is Mr. Pratik Sindhwad. Mr. Sindhwad started of the session with the prospect of choosing MBA as a career. He highlighted the positives of the career from developing management skills to being your own boss, which was all included in this package. He went on by stating the best institutions within the country where one can pursue MBA. He also gave us a rundown of various examinations a person can take, these could either be institution specific or could be accepted anywhere in the state. He stated it would take dedicatedly at least a year to prepare for these examinations and how an aspirant should not only study but also take up an internship or apply for a job for that year. Mock tests should be solved at the maximum. Students who cannot avail the benefits of coaching centers could look up for free online data.

Mr. Pratik gave us an overview of the entire admission process and how a student who is willing to take up MBA needs to prepare for it. Elite institutions usually conduct personal interview sessions or group discussions to understand the caliber of the student. It is very important that aspirant should ace these steps in order to secure admission in the institution. He went on by giving the audience an endless list of job opportunities available after the completion of the course. The sky is really the limit.

The session was followed by a Q and A session where sir addressed solutions to the variety of questions asked by the audience. A formal vote of thanks was extended by team Life Sciences It expressed the gratitude felt by the participants. Overall feedback received by the audience indicates that the resource person was quite knowledgeable. The content was simplified and was easy to follow. They were keen on knowing more topics related to this field. Webinars, which are conducted apart from the normal curriculum help mold the personality of a student and provides them with skill sets and knowledge, which will help them achieve great heights in life.

**TEACHER IN CHARGE: DR. AASHU VAJPAI**
